

[How To Edit Host File On Mac For Adobe](#)

```
hosts - Notepad
File Edit Format View Help
# Copyright (c) 1993-1999 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
# 192.168.1.1 rhino.acme.com # source server
# 192.168.1.2 x.acme.com # x client host
#
# localhost
127.0.0.1 activate.adobe.com
```

To pirate software Many expensive software packages, primarily Adobe and Microsoft products, will 'phone home' to their corporate offices to verify that the software being used on someone's Mac is a valid and properly licensed version of the software.. The IP mapping controls the browser, how the site address entered should be handled before it goes to browser's DNS resolution.. You should have an administrator privileges in order to edit the hosts file Press “Command + Space” buttons in the keyboard to open “Spotlight Search”.
